

## You are looking for a master thesis or internship position?!

### Who we are:

We are a young team of passionate enthusiasts for renewable energy solutions, located in our modern home in Burgoberbach, close to Ansbach.

In 2013 the AutarcTech GmbH was started from Werner Zenke who was not satisfied with the energy wasting balancing systems for Lithium batteries that could be found on the market.

Together with a company in Fürth a new highly efficient active balancer was developed that has meanwhile been sold into more than 1.000 storage systems around the world.

Our partners are in Austria, Italy, Paraguay, Chile, South Africa and with Vision Mechatronics we also have a strong partner in India.

From a pure manufacturer of Lithium-Iron-Phosphate batteries we have developed to a system integration company building complete systems for energy supply as well for households as also for special applications like a swimming crane on the Lake Brombach, a laboratory bus, a visitor train in Crailsheim and others.

Since last year we are more and more getting into hydrogen technology, as we believe that this technology is essential for saving our world from the climate change and its time has come now.

### Who you are:

Has your time also come to join us on our path?

If you are also thrilled by solutions for renewable energy, helping mankind to save our wonderful world, then you are welcome to join our team and you can show us what you have got.

Help us in our challenging projects either as a working student or make a difference with your bachelor or master thesis.

### In our team passion is the key.

You either have a mechanical or electrical background or programming is your thing. We need a lot of different skills for our challenging and interesting projects.

If you are interested don't hesitate to contact us:
